

Pet Peeves

11/09/2020

App Overview

Pet peeves is an app developed for pet owners so that they can keep track of their pet's appointments and prescriptions while also receiving advice on things such as food quantities and other common hassles and worries.

Target Market:

All pet owners love and adore their pets, but problems or queries can arise, especially for new pet owners, the most common ones include but are not limited to things like how much to feed the pet, exercise, weight, prescriptions and doctor's appointments. We aim to assist as many people as we can, because raising a pet is difficult and people often need advice.

Technical Overview:

The app is coded on flutter which makes it compatible with both iOS and Android. Adobe XD was used to create the initial prototype and create a design to streamline the development process. This combination makes the app visually pleasing as well as functional across a wide variety of devices.

Features:

1. Booking appointments with partnered clinics
2. Keeping track of prescriptions
3. Food recommendations and food quantities
4. Community messaging, articles and blog posts
5. Sponsored posts by pet related companies
